E-mail: roman.rabodzei@icloud.com

Reliable IT Engineer with over 18 years of experience managing on-premise and cloud-based infrastructure and solutions with a security-minded focus. Skilled in applying DevOps principles and agile methodologies to deliver high-quality products and services in a fast-paced and collaborative environment. Progressive experience in the field marked by continuous contributions above and beyond requirements. Experienced with a range of tools and technologies to automate, monitor, and optimize development and deployment processes. Meticulous attention to detail with deep technical knowledge. Adept at working with cross-functional teams and communicating effectively with stakeholders, demonstrating resiliency even in challenging situations and always seeking untapped potential for growth and innovation.

Education

College of Information Systems and Technology (Kyiv National Economic University), Associate degree, Electronics Technology and Computer Engineering, September 2003 – August 2007

Internationally Recognized IT Certifications:

Microsoft:

Azure Administrator Associate, DevOps Engineer Expert, Azure Security Engineer, Security Operations Analyst Associate, Identity and Access Administrator Associate, Azure Network Engineer Associate, Azure Virtual Desktop Specialty, Azure Data Engineer Associate, Azure Solutions Architect Expert, Azure Cybersecurity Architect Expert, Azure AI Engineer

GitHub:

Foundations, Actions, Admin, Advanced Security, Copilot

Hashicorp:

Terraform Associate

CNCF:

Kubestronaut (CKA, CKAD, CKS, KCNA, KCNS)

Skills

Cloud & Infrastructure:

Microsoft Azure, Azure Landing Zone (Enterprise-Scale), VMware, Hyper-V, Windows Server, Linux (Ubuntu)

DevOps & Automation:

Azure DevOps, GitHub Actions, GitLab CI, ArgoCD, Terraform, Bicep, ARM, PowerShell, Bash, Kubernetes, Helm, Docker

Monitoring & Security:

Azure Sentinel, Microsoft Defender for Cloud, Prometheus, Grafana, Azure Monitor, Zero Trust, IAM, Compliance (GDPR, HIPAA, FedRAMP), SIEM/SOAR

AI & Platform Engineering:

Azure AI (including Azure OpenAI Service), LLM, MCP, AI-assisted cloud operations, AI-driven platform engineering, AI governance

Methodologies & Practices:

Agile/Scrum, DevOps & SRE principles, CI/CD Governance, GitOps, Infrastructure-as-Code, Pipeline-as-Code

Architecture & Leadership:

Cloud strategy & adoption, cost optimization (FinOps), technical mentorship, stakeholder communication, cross-team collaboration

Professional experience

Principal Azure Cloud/DevOps Engineer

Rinf.Tech, Ukraine – Poland – USA – Wroclaw, Poland

August 2021 – Nowadays

Project: Financial industry, Public and Government Sector (Belgium, USA)

- Drive company-wide automation by implementing Infrastructure-as-Code with Microsoft Bicep and streamlining operations using PowerShell, Bash, AZ CLI, and KQL, embedding security best practices into provisioning and deployment workflows
- Design and implement a centralized security and monitoring solution using Azure-native services, improving observability, threat detection, and regulatory compliance across cloud environments
- Define and execute a long-term Azure cloud strategy in partnership with solution architects; conduct architecture reviews and provide deep technical guidance to ensure secure, scalable, and performant cloud solutions
- Architect and operate an enterprise-grade Kubernetes platform (AKS), embedding containerization standards, GitOps practices, and AI-assisted engineering automation to enhance governance, delivery quality, and operational resilience
- Designed and implemented an AI-powered cloud control plane (Copilot) using Azure OpenAI (GPT), enabling teams to safely observe, analyze, and operate Azure infrastructure across multi-subscription and multi-tenant environments
- Built a secure and governed AI-driven operations model, enabling controlled and auditable interaction with Azure resources using RBAC, managed identities, and centralized monitoring
- Lead the design, provisioning, and management of Azure PaaS, SaaS, and IaaS services across Azure Government and Public clouds
- Design and implement disaster recovery and high-availability solutions for critical production systems
- Collaborate with the CISO to define and implement a comprehensive cloud security strategy, establishing governance, compliance, and a security baseline using Azure RBAC, Azure Policies, Blueprints, and Microsoft Defender for Cloud
- Mentor and guide DevOps and cloud engineers, lead knowledge-sharing sessions to build team capability and promote engineering excellence
- Participate in and influence a Center of Excellence (CoE), driving cloud adoption, architectural standards, and best practices across engineering teams
- Collaborate with cross-functional teams, including architects, developers, security, and operations, providing technical guidance to deliver secure, resilient, and scalable cloud platforms

Azure Cloud/DevOps Engineer

Avenga, Lviv, Ukraine

February 2021 – July 2021

Project: Healthcare (USA)

- Provisioning and managing Azure and Kubernetes infrastructure using the Infrastructure-as-a-Code approach (Terraform, ARM templates)
- Building CI and CD pipelines using Azure DevOps, Jenkins, and Gitlab CI (Pipeline-as-a-Code approach)
- Designed and implemented disaster recovery and high availability for existing and new services
- Writing automation scripts using PowerShell and Azure CLI
- Troubleshooting issues occurred in all environments
- Configuring logging, monitoring, and alerting.
- Collaborating closely with development teams to improve the overall process and identify issues and bottlenecks.

Senior Windows System Engineer

August 2019 – November 2020

GeeksForLess, Kyiv-Lviv, Ukraine

Project: Financial industry, Banking (Canada); Sales, Web Services (Canada)

- Installation, configuration, and administration of Windows Server 2008-2019 and services. Automation tasks with PowerShell scripting
- Administration of Ubuntu servers and services: bind, apache2, nginx
- Managing Windows OS Patch Management with Symantec Altiris
- Managing data and systems backups with HP Data Protector and Veeam Backup
- Managing VMware virtualization (vSphere, vCenter, ESXi 5.5/6.5, vSphere Replication, vSan)
- Managing AWS and Azure clouds: infrastructure and identities, improving services for cost optimization and reliability
- Implementing and configuring Prometheus, Grafana, and AWS CloudWatch monitoring systems, managing SolarWinds Server and App Monitor, and Azure Monitor
- Designed and implemented disaster recovery and high availability for existing and new services
- Managed enterprise migration of Windows and Linux-based workloads from on-premise data centers to Azure IaaS and AWS, including VM replication, networking configuration, identity integration, and infrastructure support for SQL Server and SAP workload transition.
- Investigation and troubleshooting issues, collaboration with stakeholders, developers, and network engineers

Network and System Engineer

Premier Plus, Kyiv, Ukraine

October 2010 – August 2019

- Installation, configuration, and administration of Windows Server 2008-2016 and services. Automation tasks with PowerShell scripting
- Administration Exchange Server 2016, MDAEMON mail server, MTA servers, ORF Fusion spam filter
- Managing Forefront TMG 2010, Kerio Control firewalls
- Managing F-Secure Antivirus for servers and workstations, Eset Mail Security
- Installation, configuration, and management of Hyper-V and VMware virtualization (vSphere, vCentre, ESXi 5.5/6.0/6.5)
- Managing data and systems backups with Symantec Backup Exec, Veeam Backup, and Acronis Backup
- Managing PRTG monitoring systems
- Installation, configuration, and administration of Ubuntu servers and services: UFW, Samba, NFS, Kerberos, Docker
- Implementation and management of the OTRS5 helpdesk system
- Implemented Rocket.Chat corporate messenger
- Routers and switches management: Cisco 1811W, 2821, Catalyst 3750
- Installation, configuration, and management of Windows, Linux, and macOS-based personal computers and peripherals, and remote user support
